CAPCom operates since 1996 as a full-service solution provider for online media and interactive exhibits. We create modern web sites and optimize existing ones so your customers will find them more quickly and will navigate them more easily - using desktop or smartphone. We assist you in presenting your services or products in a descriptive and comprehensible way, if required in 3D or using interactive elements. The right presentation is especially a factor with products in need of explanation and can - where necessary - take tangible form as an interactive digital exhibit.
